

AI Circle Server

Preview

Circle has announced the launch of its AI chatbot and MCP server, allowing users to generate code directly in a browser or integrated development environment (IDE) (such as @cursor_ai) and integrate USDC, CCTP, gateways, wallets, and smart contracts within minutes. Note: If you are using a client that is not listed here, you can still use the Circle MCP server by manually adding the. Connect your AI assistant to your CircleCI data to debug failures, analyze test results, and improve pipelines using natural language. It's built on the Model Context Protocol. Modern continuous integration and delivery (CI/CD) pipelines generate large volumes of data--logs, test results, deployment metrics, and failure diagnostics--that developers must manually sift through to identify and resolve issues. In this repository, we provide an MCP Server for CircleCI. Use Cursor, Windsurf, Copilot, Claude, or any MCP-compatible client to interact with CircleCI using. PANews reported on November 11th that Circle has announced the launch of an AI chatbot and MCP server. This project acts as a bridge between CircleCI's infrastructure and the Model Context Protocol, enhancing the development.

HOW TO GET ROLES IN @liquidtrading new roles are here! as I told you before there are only 3 roles now in liquid discord server ? inner circle role - top traders and content creators of

In this repository, we provide an MCP Server for CircleCI. Use Cursor, Windsurf, Copilot, Claude, or any MCP-compatible client to interact with CircleCI using natural language -- without leaving your IDE.

Explore Circle's new AI tools for developers, including an AI chatbot and MCP server, and how they simplify building meme tokens and blockchain projects with USDC integration.

In this repository, we provide an MCP Server for CircleCI. Use Cursor, Windsurf, Copilot, Claude, or any MCP-compatible client to interact with CircleCI using

Armada Inc., a provider of portable data centers and satellite internet software, has raised \$230 million in funding at a \$2 billion valuation. The company disclosed in its announcement of the ...

Integrate Circle's MCP server to let your LLM or AI-assisted IDE generate and fix code for crypto apps using Circle's offerings, including Wallets, Contracts, CCTP,
