

Cable tray construction in the Dominican Republic

Article Overview

The Dominican Republic is seeing significant cable tray and cable management projects across data centers, telecom infrastructure, and commercial construction, driven by both private and public sector initiatives.

Key Projects and Initiatives

1. Data Center and Connectivity Projects Google is investing \$500 million in a digital connectivity hub in the Dominican Republic, which includes the installation of a submarine cable network connecting the country directly to the US (South Carolina and Virginia). This project, starting in March 2026 and expected to complete in early 2027, will significantly expand fiber capacity, reduce latency, and enhance digital infrastructure, creating substantial demand for cable trays and related management systems in data centers and telecom facilities . 2. Transportation Infrastructure The Santo Domingo Oeste Cable Car system is undergoing expansion, with the third line costing approximately \$250 million. This project involves extensive electrical and cable management installations, including cable trays for power distribution and control systems . 3. Commercial and Industrial Construction The Dominican Republic's electronics and commercial construction sectors are supported by local cable tray manufacturers such as Cable House and Brilltech Engineers, which supply perforated and ladder cable trays for industrial, commercial, and telecom applications. These manufacturers provide customized solutions that meet stringent quality standards and are increasingly integrated into large-scale construction projects .

Cable Tray Manufacturing and Supply

The country has a growing cable management ecosystem, with manufacturers operating in free zones that benefit from 0% corporate tax and duty-free access to the US under CAFTA-DR. This setup allows rapid delivery (3-5 days by ocean freight) to US-based projects, making the Dominican Republic a competitive supplier for cable trays, conduits, and raceways .

How to Track Projects

For businesses or investors interested in cable tray projects, platforms like Blackridge Research and Tendersinfo provide detailed databases of ongoing and upcoming construction projects, including specifications, tender opportunities, and procurement details. These platforms cover infrastructure, energy, IT, and commercial construction projects, allowing stakeholders to identify opportunities in cable management and related installations .

Summary

Cable tray construction in the Dominican Republic

Cable tray construction in the Dominican Republic is expanding across multiple sectors:

- o Data centers and telecom networks (e.g., Google connectivity hub)
 - o Urban transportation systems (e.g., Santo Domingo Oeste Cable Car)
 - o Commercial and industrial construction (supported by local manufacturers)
- The combination of government-backed infrastructure projects, private investments, and a robust local manufacturing ecosystem positions the Dominican Republic as a growing hub for cable tray and cable management system projects .

In 2018, with the construction of the first urban cable car in the Caribbean, the story of Poma RD begins in the Dominican Republic.
