After a power outage on the high-voltage line, workers can climb onto the pole and use a cloth to wipe the insulators. If the pollution is heavy, you can use a damp cloth or detergent to scrub. PF-QD is a fast evaporating and odourless solvent for zero residue cleaning and degreasing of low and high voltage switchgear. A non corrosive electrical cleaning solvent on metal such as copper, aluminium, magnesium and stainless steel, PF-QD is suitable for use on metal and painted switchgear. There are different cleaning methods used as the routine maintenance and choice of a particular method is based on following two main factors: a. Nature of contamination involved b. Expected downtime allocated Different tests are also conducted to check for operational abnormalities after the. This helps to dissolve contaminants while ensuring the high voltage insulator remains undamaged. Key elements include: Sealed enclosures: Junction and distribution boxes with IP65 or IP66 protection, made of materials resistant to humidity and corrosion. Protected switches and sockets: With weatherproof covers or special seals to block.
