For optical cables, the relevant standard is DIN VDE 0888. Variants of designations are used by institutions like Deutsche Telekom and German Railways. Optical communication cables contain or surround one or more optical communication fibers. In the following tables the meaning. TO THE DIN / VDE 0888-3 The German standardization institutes of DIN & VDE use a set of letter codes for the designation of the cables. We use. This invention relates to fiber optic cables and the structure for reinforcing the tensile and compressive strength characteristics of the optical fibers contained within the fiber optic cables. However, it is not always easy to find out what has been covered, and where it can be found.
