

Do you have a quad-gang SC adapter

Article Overview

Yes, quad-gang SC adapters (4-port SC adapters) are available in both flanged and flangeless versions for single-mode and multimode applications.

Product Options

- o L-com SN SC Duplex Quad Channel Adapter: This 4-channel (8-fiber) adapter fits legacy SC duplex or LC quad cut-outs, allowing retrofitting into existing panels without redesigning hardware. It is non-shuttered, stackable, and ideal for increasing port density while reducing rack space usage .
- o Fibertronics SC Quad Adapters: Available in single-mode and multimode, these adapters come in simplex, duplex, and quad (4-port) versions. They feature zirconia or bronze sleeves and can be customized for hybrid assemblies .
- o ACON OPTICS SC Quad Adapters: Offers a broad range of SC adapters in plastic or metal, with flanged or flangeless options, and zirconia sleeves. These are suitable for telecom, data centers, and high-density fiber applications .
- o QuantumConnect 4-Port Adapter Plate: Designed for flangeless SC duplex or LC quad adapters, this plate provides a durable mounting solution for patch panels and enclosures, ensuring organized fiber management .

Key Considerations

- o Mode Compatibility: Ensure you select single-mode or multimode based on your network requirements.
- o Flanged vs Flangeless: Flanged adapters provide secure mounting in panels, while flangeless adapters allow flexible integration in high-density plates.
- o Retrofit Capability: Some quad adapters are designed to fit existing SC/LC cut-outs, doubling port density without replacing hardware.
- o Sleeve Material: Zirconia sleeves are common for precision alignment and low insertion loss. These options make it possible to upgrade or expand fiber optic systems efficiently while maintaining high-density connectivity. For specific orders or custom configurations, contacting the supplier's technical support is recommended.

LC style adapters are used in high density applications and feature a quick plug in installation.
