Optical distribution frames (ODF's) are an all-important network element at the heart of this fiber network. Representing <5% of a typical IT project investment, high density, performance, and quality are pivotal attributes for an ODF ensuring business continuity 24/7/365. Panduit FlexCore(TM) Optical. An ODF is a centralized platform designed for terminating, cross-connecting, and managing optical fibers. It ensures fiber management is structured, minimizes signal loss, and provides accessibility for maintenance and future expansion.
