Article Overview

To install a Swisscom Network Distribution Box, connect it to power, link it to your router via Ethernet, attach your devices, and then turn it on.

Step-by-Step Installation

- o **Position the Box** Place the distribution box in a stable, upright location away from metal objects or other electronics to ensure optimal performance and signal distribution .
- o **Connect to Power** Plug the electric cable into a power socket and ensure the box receives electricity .
- o **Connect to Router** Use an Ethernet cable to connect your router to the Network Distribution Box. Typically, the connection is made to port 5 on the box . This allows your internet service to be distributed to connected devices.
- o **Connect Devices** Attach your devices such as a TV-Box, computer, or other Ethernet-enabled devices using Ethernet cables. You can connect multiple devices simultaneously, depending on the number of available ports .
- o **Turn On the Box** Switch on the Network Distribution Box. Wait for the status LEDs to indicate proper operation. For example, a white or green light usually signals that the box is ready and connected .
- o **Optional: Use the My Swisscom App** For additional setup, including TV-Box configuration or voice control, scan the QR code in the My Swisscom App and follow the guided instructions . This app helps manage multiple TV-Boxes and ensures proper integration with your router.

Tips for Optimal Setup

- o **Avoid Obstructions:** Keep the box away from walls, metal surfaces, or other electronics that may interfere with Wi-Fi or Ethernet signals .
- o **Check Cables:** Use the Ethernet cables provided or recommended by Swisscom to avoid signal loss .
- o **Multiple TV-Boxes:** You can connect up to five TV-Boxes per household, regardless of model, but ensure device limits are not exceeded .
- o **Troubleshooting:** If the box does not function correctly, try restarting it or performing a reset following the instructions in the manual . Following these steps ensures a safe, efficient, and fully functional installation of your Swisscom Network Distribution Box, providing reliable internet and TV connectivity throughout your home.
