The Intelligent PDUTM provides network-grade power distribution, remote/local monitoring, and outlet control. While both can provide reliable power distribution to critical IT equipment within a rack or cabinet, intelligent PDUs offer several smart features to help data center. iPower ACU is a 3rd generation of intelligent PDUs design to aid Data Centre power management. The range consists of four models offering various levels of power monitoring and power switching features, and can be manufactured as single, dual or 3-Phase with a choice of socket types and mains lead. What is an Intelligent PDU? While basic PDUs provide simple power distribution and protection against overloads, intelligent PDUs have an embedded processor that controls and manages the advanced features like real-time monitoring, remote management, and analytics.

PDU Controller All Panduit G5 Intelligent PDUs feature a Rotatable or Hot Swappable Intelligent Network Controller (iNC). This centralized piece of intelligent hardware receives an IP

Switching features make intelligent PDUs special. Switched managed PDU units can turn power on and off and set delays. This stops overloads and keeps systems safe. Basic PDUs do not have switching.
