

Article Overview

KeepLiNK PoE gigabit switches provide reliable high-speed connectivity with Power over Ethernet support, ideal for powering IP cameras, access points, and other network devices.

Key Features

Port Configuration and Speed: KeepLiNK switches typically offer 10 ports, with 8 PoE+ ports supporting IEEE 802.3af/at standards and 2 uplink ports at 1 Gbps for connecting to routers or other network devices . Each PoE port can deliver up to 30W, with a total PoE power budget of 120W, sufficient for multiple devices simultaneously . **PoE Management and Reliability:** These switches include AI WatchDog functionality, which automatically restarts PoE devices if they fail or go offline, ensuring continuous operation . Managed models support L2/L2+/L3 QoS, IGMP Snooping, Link Aggregation, and Flow Control, allowing prioritization of video or voice traffic and improved network stability . **Durability and Environmental Tolerance:** KeepLiNK switches are designed for industrial-grade use, with aluminum housings, fanless operation, and wide operating temperature ranges from -30°C to 75°C, making them suitable for harsh environments . They also feature overload and reverse connection protection, surge protection, and IP40 dust protection . **Ease of Deployment:** Many KeepLiNK switches are plug-and-play, supporting both PoE and non-PoE devices, and can isolate ports via VLAN to prevent network storms and ensure independent data transmission . Multi-gigabit PoE switches can also support higher speeds (2.5Gbps, 5Gbps, 10Gbps) for future-proofing high-bandwidth networks . **Use Cases:** Ideal for IP cameras, wireless access points, VoIP phones, and small to medium office networks, these switches simplify cabling by combining data and power over a single Ethernet cable, reducing installation complexity and costs .

Summary

KeepLiNK PoE gigabit switches are reliable, high-performance devices that combine stable power delivery, gigabit connectivity, and industrial durability. They are suitable for both home and professional deployments, offering features like automatic device recovery, VLAN isolation, and managed traffic control to maintain a stable and efficient network .

Plug and Playâ Metall lüfterlos: Der unmanaged PoE-Switch ist einfach zu bedienen, keine Konfiguration

We provide a wide range of PoE/PoE+/PoE++ switches with up to 90 W output per port to deliver high-speed data transmission while
