

Price chart for light control modules

Article Overview

A vehicle light control module typically costs between \$400 and \$1,200 for replacement, with repair options available at 30-50% lower cost.

Replacement Costs

For most domestic and import vehicles, a complete lighting control module replacement--including parts and labor--ranges from \$400 to \$1,200. The module itself can cost \$80 to \$800, depending on whether it is an OEM or aftermarket part, while labor typically ranges from \$150 to \$600. Vehicles with simpler electrical systems or easier access to the module fall toward the lower end, whereas complex systems or modules integrated into larger control units can increase costs significantly . OEM modules are generally 2-4 times more expensive than quality aftermarket alternatives but offer guaranteed fit and longer warranties .

Repair Options

Repairing a faulty LCM is often 30-50% cheaper than buying a new module. Services like UpFix provide plug-and-play repairs for headlights, tail lights, and interior lighting, which can extend the module's life and reduce overall costs .

Factors Affecting Cost

- o Vehicle make and model: Some modules are easier to access, reducing labor costs.
- o Labor rates: Costs vary by location and whether you use a dealership or independent shop.
- o Module type: OEM vs. aftermarket, and whether the module is integrated with other systems.
- o Repair vs. replacement: Repairing can save money but may not be available for all module types.

Summary

- o New LCM replacement: \$400-\$1,200
- o Module part alone: \$80-\$800
- o Labor: \$150-\$600
- o Repair: 30-50% less than replacement Choosing between repair and replacement depends on your vehicle's complexity, warranty considerations, and budget. Always request a detailed estimate before authorizing work to ensure accurate pricing for your specific vehicle .
