

Price of Custom Optical Power Meter Chips

Article Overview

The price of custom optical power meter chips varies widely, typically ranging from \$9 to \$40 per unit depending on specifications, volume, and manufacturer, with custom designs requiring direct quotations from suppliers.

Pricing Overview

Custom optical power meter chips are specialized components used in fiber optic testing and measurement. Their cost depends on several factors:

- o Technical specifications: Wavelength range, dynamic range, sensor type (photodiode or thermopile), and calibration accuracy significantly affect pricing .
- o Volume: Bulk orders reduce per-unit cost. For example, some suppliers offer prices as low as \$16 per unit for orders of 1,000+ units .
- o Integration and features: Chips integrated with light sources, wireless connectivity, or multi-wavelength support may cost more, ranging from \$14 to \$38 per unit .
- o Supplier and brand: Established suppliers like Thorlabs provide calibrated, NIST-traceable sensors, which may command higher prices due to quality and reliability .

How to Obtain Custom Pricing

Since custom optical power meter chips are tailored to specific requirements, direct quotations from manufacturers are necessary. Platforms like GoPhotonics allow you to submit your specifications and receive quotes from multiple suppliers, ensuring competitive pricing and options for customization .

Market Trends

The optical power meter market is growing steadily due to 5G deployment, FTTH projects, and data center expansion. This has led to stable pricing with reduced volatility, though high-end or highly customized chips remain premium items .

Practical Advice

- o Clearly define your wavelength, power range, and connector requirements before requesting quotes.
- o Consider bulk orders to reduce cost per unit.
- o Evaluate suppliers for calibration standards, reliability, and support.
- o Compare modular vs. integrated solutions to balance cost and functionality. By following these steps, you
