

Price of Home Electrical Distribution Boxes Installed on Construction Sites

Article Overview

Home distribution boxes typically range from \$50 to \$500, while construction site power distribution boxes can cost between \$200 and \$1,500 depending on capacity and features.

Home Electrical Distribution Boxes

Home distribution boxes, also known as breaker panels or fuse boxes, serve as the central hub for electricity in residential buildings. Standard residential units range from basic single-phase systems to more complex three-phase systems, with prices generally between \$50 and \$500 depending on the number of circuits, amperage capacity, and material quality. Modern units may include smart monitoring, energy efficiency features, and surge protection, which can increase the upfront cost but provide long-term savings. Weather-resistant enclosures for outdoor installation are typically more expensive than indoor-rated units.

Construction Site Electrical Distribution Boxes

Construction site boxes, also called site boxes or temporary power distribution units, are designed for robust, temporary use in harsh environments. They provide multiple sockets, circuit breakers, differential switches, and emergency stop buttons to ensure safety on sites. Prices for these units vary widely based on current rating, number of outlets, protection level (IP rating), and material, typically ranging from \$200 to \$1,500. High-end models may include built-in meters, voltage/current displays, and waterproof or dustproof enclosures for outdoor use.

Key Factors Affecting Price

- o Material and Durability: Sheet steel, thermoplastic, or fiberglass enclosures affect cost and impact resistance.
- o Voltage and Amperage Capacity: Higher capacity units for industrial or heavy-duty use are more expensive.
- o Number of Circuits and Sockets: More circuits or outlets increase complexity and price.
- o Safety Features: Surge protection, ground fault circuit interrupters, and arc fault detection add to cost but improve safety.
- o Environmental Rating: IP65 or higher for outdoor use increases price due to waterproofing and dustproofing.
- o Customization: Special mounting, labeling, or integration with building management systems can further increase costs.
