

Price of a 1-meter electrical distribution box

Article Overview

A 1-meter electrical distribution box typically costs between \$200 and \$2,000, depending on materials, internal components, and installation requirements.

Price Range and Factors

The cost of a distribution box varies widely based on size, material, amperage, number of circuits, and whether it comes pre-equipped with breakers or is empty. Standard residential units generally range from \$150 to \$1,500, while commercial or industrial-grade boxes can reach \$2,000 or more due to higher durability, larger capacity, and advanced features like surge protection or smart monitoring systems . Outdoor-rated or weather-resistant enclosures usually carry a premium compared to indoor units .

Material and Component Influence

- o Enclosure Material: ABS plastic, powder-coated steel, or stainless steel significantly affects cost. Stainless steel units are more expensive but offer superior corrosion resistance, especially in coastal or industrial environments .
- o Internal Components: Boxes sold empty are cheaper, but adding high-quality circuit breakers, busbars, and surge protectors increases the price .
- o Amperage and Phase: Higher amp ratings and three-phase systems cost more than single-phase residential units .

Installation and Labor

Professional installation is strongly recommended for safety and compliance with electrical codes. Labor costs vary by region and complexity, often making up a significant portion of the total project cost . DIY installation is not advised, as it can void insurance and pose safety risks .

Summary

For a 1-meter distribution box, expect a base price of \$200-\$500 for a simple residential unit, while fully equipped or industrial-grade boxes can cost \$1,000-\$2,000 or more, including installation. The final price depends on materials, internal components, amperage, environmental rating, and labor costs .
