A SOC uses advanced technologies and standardized processes to protect an organization's digital assets. These tools typically include security information and event management (SIEM) systems, intrusion detection and prevention systems, and threat intelligence platforms. Organizations can build in-house, outsource to managed providers, or take a hybrid. Proactive security is a must to keep up with evolving cyberthreats and building a blue team program is the best strategy to incorporate proactive methods. This article explores the foundational elements of a Security Operations Center (SOC), which provides the infrastructure and expertise required.
