

The electrical distribution box downstairs is missing its cover

Preview

There are one or more missing breaker slot covers in your main electric panel. Click for Video Link If your EICR just failed because of a damaged consumer unit cover, missing screws, or missing blanks, don't worry, this is one of the most common C2 failures we see across London properties. The good news: this issue is usually quick to repair, affordable, and a straightforward fix for a qualified. During an EICR there are often several observations that almost defy belief that such blatant disregard for basic electrical safety has been shown on items that have been installed and certificated on a regular basis. Note: Clamp location is on street side and house side of the water shut off valves. I recommend having an electrician replace the missing covers to ensure safety.

Your EICR failed due to a damaged consumer unit cover or missing blanks? This C2 fault

From clever disguised cabinets to chic wall hangings, these are the best safe and stylish

It appears that someone is holding up the outside cover, that should be locked so kids couldn't mess with it and
