An integrated critical power system utilizes one or more energy sources to provide resilient and sustained backup power. It's called "integrated" because it's incorporated into the main power supply. With its wide range of Uninterruptible Power Supplies (UPS), Delta offers a competitive edge to businesses in need of first-rate power solutions. From a small UPS to save and shut down your PC, to large commercial systems that power large data centers or critical systems in hospitals, we have the solutions you and your customers. An uninterruptible power supply (UPS) or uninterruptible power source is an electrical apparatus that provides emergency power to a load when the input power source or mains power fails. A UPS differs from an auxiliary or emergency power system or standby generator in that it will provide. Different types of UPS systems provide varying levels of power protection, each designed to address specific application requirements and budget considerations. Reliable protection for industrial controls. Continuity of process control is critical across a wide range of Industrial segments: Water/Waste Water, Biotech / Pharmaceutical, Transportation, Chemical, Food &.
