UV DTF printing (Direct-to-Film) is an advanced printing technology that prints designs onto a special release film, which is then transferred onto the surface of packaging boxes. LogoJET UV printers make it possible to print to thousands of units. Print directly on glass, plastic, metal, and coated materials -- even irregular shapes. Corrugated packaging is often highly customized and uniquely designed, which can be easily accomplished with the UV printer's ability to print a wide range of. UV printing revolutionizes the traditional printing landscape with its ability to instantly cure inks using ultraviolet light. Compared with ordinary packaging, colorful and personalized custom boxes can significantly enhance the added value of products. Unlike traditional methods, UV printing is eco-friendly, eliminating harmful.
