3-pole, tool-free mounting, short circuit-resistant up to 65 kA, fully contact hazard-protected and with standard flat copper bars for global use. In electric power distribution, a busbar (also bus bar) is a metallic strip or bar, typically housed inside switchgear, panel boards, and busway enclosures for local high current power distribution, transmission, or switching substations. They are also used to connect high voltage equipment at. Core idea: A busbar is a conductive bar or assembly that creates a common current distribution point inside electrical equipment. In this case, bus bar configuration might be low in profile, thereby changing the orientation of the bus structure and the airflow. Complete solutions for AC or DC applications.
