Use plastic optical fiber panels to create light where you need it and adding multiple layers can be used to enhance brightness while maintaining uniformity. They act as interface points where incoming and outgoing fiber optic cables can be connected, facilitating easy organization and maintenance of network. The optical fiber distribution frame (ODF) is mainly used for the termination and wiring of the trunk line optical cables in optical fiber communication and can conveniently realize the connection, wiring, and scheduling of the optical fiber lines. What is a Patch Panel Used for? The fiber optic patch panel is. A patch panel is essentially an array of ports on one panel.
