

Where can I find a power distribution box in Brunei

Article Overview

Power distribution boxes in Brunei are managed by the Department of Electrical Services (DES) and are distributed across all districts, but exact locations are not publicly disclosed for safety reasons.

Overview of Brunei's Distribution Network

The Department of Electrical Services (DES) is responsible for the generation, transmission, and distribution of electricity throughout Brunei, covering all districts including Temburong, Belait, Tutong, and Brunei-Muara . DES operates a network that distributes electricity at multiple voltage levels: 66 kV, 11 kV, 415 V, and 240 V, ensuring supply to residential, commercial, and government facilities . The distribution network includes power distribution boxes (also called distribution substations or panels) that step down voltage and route electricity to end users.

Distribution Box Placement

- o District Coverage: DES supervises the entire country, with distribution boxes strategically placed along transmission lines and within neighborhoods to provide reliable electricity .
- o Voltage Levels: High-voltage transmission lines (up to 66 kV) feed into distribution boxes, which then supply lower voltages (11 kV, 415 V, 240 V) to homes and businesses .
- o Power Stations: DES operates four main power stations--Gadong 1 and 2, Bukit Panggal, and Lumut--which feed into the distribution network .

Accessing Specific Locations

For exact locations of distribution boxes, DES does not publicly release this information due to safety and security concerns. If you need to locate a distribution box for maintenance, inspection, or connection purposes, you should:

- o Contact DES directly via their official website or customer service channels: <https://www.des.gov.bn>, .
- o Request assistance for site-specific information, as DES can provide guidance or send authorized personnel to the location.
- o Refer to local utility maps if available through DES for planning or construction purposes, which may indicate general areas of distribution infrastructure without revealing sensitive details.

Summary

While the exact physical locations of power distribution boxes in Brunei are not publicly available, they are systematically distributed across all districts and managed by DES. For any operational or technical needs,

Where can I find a power distribution box in Brunei

contacting DES is the recommended approach to obtain accurate and safe information .
