Generally, EPS consists of a torque sensor that detects the driver's steering torque, an EPS ECU that calculates the assist torque based on the torque signal and controls the motor drive, a motor that generates assist, and a speed reducer that transmits the motor drive force. Generally, EPS consists of a torque sensor that detects the driver's steering torque, an EPS ECU that calculates the assist torque based on the torque signal and controls the motor drive, a motor that generates assist, and a speed reducer that transmits the motor drive force. Configured with EPS Box, customers just need to connect 3 wires between inverter and EPS Box. It can simplify the operation and improve security. Note: the following is the wiring diagram of EPS BOX TP. The function of TP is. Also known as motorized power steering (MDPS), it uses an electric motor to assist the vehicle's driver.
